

# Printex™ Cores

Printex® Cores were specifically designed to help ease the pressures experienced by textile producers when it comes to inventory management and cost constraints. The ability to offer a dependable core at a lower cost, that still delivers value and performance are what drove our development of Printex Cores.

## CHALLENGES:

Textile producers need a reliable core that also helps streamline the production process. They also require a high-quality core, but in smaller quantities. And, they need increased colour variations to improve recognition and identification.

## BENEFITS:

- High number of colour variations for improved recognition
- Reduced inventory costs via just-in-time manufacturing
- Streamlined manufacturing process
- Decreased manual labour costs
